

DUO

2-SECTION BIFOLD DESIGN

The Arc3D™ Duo from DoorWall Systems makes history with its innovative design, components and performance. Proud of its design history, this model minimizes interior and exterior projection by using two vertical lift frame sections. The panels can be custom clad with almost any configuration including glass, wood, stone and high performance metals.

INTRODUCING ARC 3D™

VERTICALLY FOLDING OPERABLE WALLS

Our patented Architectural Direct Drive Door System™ (Arc 3D™), reconciles custom design with energy efficient functionality. The Arc 3D™ is an award winning, space saving innovation that supports contemporary design trends and integrates with historic renovation projects seamlessly.

This is how we create welcoming, bright and sophisticated interior or exterior spaces that exceed top safety requirements.

- Zero sidewalk projection
- Integrated high-security applications
- Thermally broken frame engineered for maximum energy efficiency
- Matching wall cladding and glazing
- Custom manufacturing and high performance engineering
- Compliance with ASTM, UL 325 and NEMA requirements

BUILT BEST FROM THE INSIDE OUT

Our engineers can quickly navigate complex situations and assist with specific owner-driven design requirements. It is our goal to solve your open space, architectural challenges with advanced engineering. We build our vertically operated DoorWalls to be classically elegant, ruggedly durable and incredibly functional.
